LOWTIDE for holders

LOWTIDE sells open-model AI inference from real, bonded GPUs at prices that drop when those GPUs are idle, settled in USDG on Robinhood Chain.

$TIDE is launching soon. The LOWTIDE protocol itself is launching in phases on Robinhood Chain: it is built and in testing, not yet on mainnet. See the roadmap for what is live.

Why it matters

- **Real compute, not resold credits.** Every model is open-weight and served by a registered, bonded host. LOWTIDE doesn't proxy any third-party API account.
- **The discount comes from idle time.** Hosts post 168 hourly prices, and router-measured load can cut a quiet host's live price to 0.4× its posted price.
- **Your balance is cash.** Prepaid USDG sits in a vault that you can withdraw from. Withdraw-all completes within 2 hours.

- **Agents pay as they go.** Payment channels and x402 let an agent pay per call with no account.
- **Proof, not promises.** Every response carries a usage record signed by the router and the host, and hourly totals go on chain. Hosts bond USDG and are audited for model swaps.

What $TIDE does

$TIDE is a utility token, launching soon. Its hooks in the LOWTIDE protocol switch on after written legal review.

- **Fee tiers.** Lock $TIDE to lower the 4% LOWTIDE fee by up to 1 percentage point.
- **Early Window access.** First access to Windows, LOWTIDE's tradable capacity reservations.
- **Host bond weight.** $TIDE bonded by a host ranks it higher in routing, capped at +25%, and is slashable.
- **Burn.** 5% of fees buys and burns $TIDE.

Holding $TIDE alone earns nothing. It is not a share of fees, a yield or an investment.

Upcoming catalysts

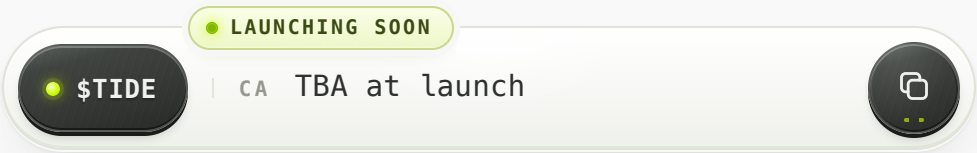

These are planned, in order, with no dates set:

1. **External contract audit**, then mainnet protocol contracts on Robinhood Chain with a 500 USDG per-buyer beta cap.
2. **Real GPU hosts and launch models** on the OpenAI-compatible API.
3. **Agent payments:** channels and x402 on mainnet, plus night jobs.
4. **Windows:** tradable future-capacity reservations, plus the sealed tier.
5. **$TIDE hooks switched on**, but only after legal review.
